

This form must be completed and submitted with every assignment, as per the department's Academic Integrity and AI Policy. Transparency is essential to proving your creative ownership and learning process.

Part 1: Student & Assignment Details

Student Name:	<u>Jessica Mifsud</u>	ID Number:	<u>187907L</u>
Unit:	<u>Introduction to Web Development</u>	Task:	<u>2</u>
	<u>[GRD5.1] (25-26)</u>		
Date:	<u>17th May 2026</u>		

Part 2: Declaration of AI Use

Please select one of the following options:

☐ **Option A: No AI Used:** I declare that I did not use any generative AI tools in the conception, development, or creation of this assignment. The submitted work is entirely my own.

☒ **Option B: AI Used:** I declare that I did use AI tools to assist in the creation of this assignment. I have provided a transparent and accurate account of its use in Part 3 below and have submitted all required process work in support of my final submission.

Part 3: Description of How AI Was Used

(Please tick all that apply and provide a brief, specific example for each. For an explanation of each refer to the AI Use Policy Manual)

- | | |
|--|--|
| ☐ Ideation & Brainstorming | ☒ Research & Summarization |
| ☒ Text Generation & Refinement (Writing/Scripting) | ☐ Image/Asset Generation: |
| ☐ Other (Please specify): | |

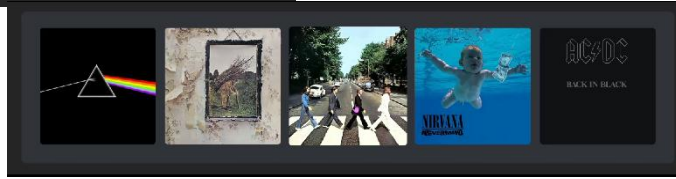

Throughout this assignment, I used AI tools such as Gemini, ChatGPT, and Perplexity to assist me with fixing structural errors, adding animations, improving layouts when I could not find suitable tutorials, and implementing certain JavaScript functions, as JavaScript was never covered during lectures. Since I already had a basic understanding of JavaScript, I was able to understand and evaluate the code and suggestions provided by these tools rather than simply copying them directly.

I also adjusted and refined many of the generated outputs whenever they did not fully match the result I had in mind. The overall design choices, layout decisions, and final refinements were completed independently by myself. Due to time constraints and multiple assignment deadlines, I used AI tools mainly to speed up my workflow and help me complete the task on time.

No Hover

With Hover (middle album cover is being hovered)

so i want a hovering transition to the album covers (each album cover is under album art) but it's not working. what do i need to do? @import url('https://fonts.googleapis.com/css?family=Poppi&weight=300&400&500&600&700&display=swap');

Show thinking

It looks like you've set the stage for a smooth transition by adding the `transition` property to `.album-art`, but you're missing the actual trigger. In CSS, the transition tells the browser how to change, but the `:hover` selector tells it when and what to change.

Right now, your `.album-art` has the "patience" to transition over 0.5 seconds, but it doesn't have any instructions on what to do when your mouse hits it.

The Fix

Add a `:hover` rule for the `.album-art` class. You'll also want to make the `transform` value a bit more noticeable than `scale(1.05)` (which is almost invisible to the naked eye).

```
CSS
```

```
CSS
```

Why it might still feel "stiff"

If you apply the hover to a container but the image is inside it, sometimes the image doesn't behave. To ensure everything stays smooth, make sure the base state of `.album-art` (which you already have) includes the property you want to change:

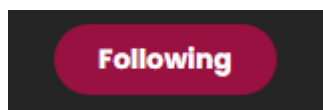

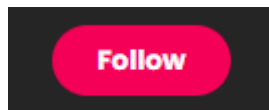

```
CSS
```

A few extra tips for your layout:

- **Z-Index:** When an album cover scales up, it might get clipped by the ones next to it or look like it's "under" them. Adding `z-index: 10;` to the `:hover` state ensures the hovering album stays on top.
- **The 1.01 Scale:** In your `.album-card` class higher up, you used `transform: scale(1.01);`. That is only a 1% increase. On a 350px image, that's only about 3.5 pixels—usually too small to notice as a "transition." Try `1.05` or `1.1` for that classic "Spotify-style" pop.
- **Overflow:** Ensure your `.album-grid` or `.album-section` doesn't have `overflow: hidden;` if you want the covers to be able to "grow" outside their original bounds.

Give that a shot! If the covers still aren't moving, check your HTML to make sure the class name `.album-art` is actually on the `<img>` tag and not a parent `<div>`.

How is the rest of the layout holding up? Those container widths (2375px) are massive—are you designing for a specific ultra-wide monitor?

this is my current html and css code -<button class="edit-btn">Follow</button> -edit-btn { background-color: #f50057; color: white; border: none;...}

To make your current `.edit-btn` toggle to a "Following" state, we need to add a bit of CSS for the "clicked" look and a small JavaScript function to handle the text swap.

Since you are using a solid pink background, a common "Following" style is to switch to a transparent background with a border, or simply change the text and dim the color slightly.

1. Updated CSS

Add a `.following` class to your CSS. This is what the button will look like after it's clicked.

```
CSS
```

```
CSS
```

2. Updated HTML

Add an `id` so the script can find the button, and the `onclick` attribute to trigger the change.

```
HTML
```

3. The JavaScript

Add this function to your `<script>` area. It toggles the class we created above and swaps the text.

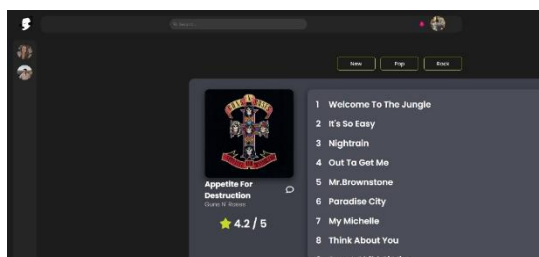

```
JavaScript
```

Pro-Tip for your Modal:

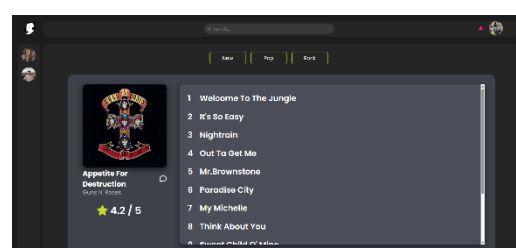

Since this button is inside a popup, you probably want it to reset to "Follow" every time you open a different album. Inside your `openAlbum` function, just add this line:

```
JavaScript
```

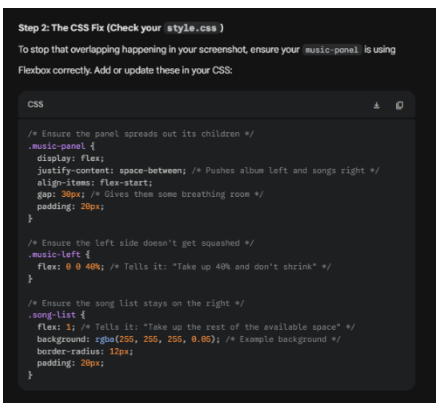

This ensures that if you follow one artist, the button doesn't stay stuck on "Following" when you click to view a different artist.

before

after

```

10 CSS
11
12 p {border: 1px solid #ccc;
13     transition: border 0.5s;
14     overflow: hidden;
15     height: 100px;
16     background: linear-gradient(to right, #f0f0f0, #e0e0e0);
17 }
18
19 
```

4. Active State

```

10 CSS
11
12 .comment {background-color: #f0f0f0;
13     padding: 10px;
14 }
15
16 
```

5. Header

```

10 CSS
11
12 .comment {border: 1px solid #ccc;
13     padding: 10px;
14     justify-content: space-between;
15     align-items: center;
16     margin-bottom: 10px;
17 }
18
19 .comment {border: 1px solid #ccc;
20     padding: 10px;
21 }
22
23 .comment {border: 1px solid #ccc;
24     padding: 10px;
25     margin-bottom: 10px;
26 }
27
28 .comment {border: 1px solid #ccc;
29     padding: 10px;
30 }
31
32 
```

POPUP

```
<div class="comment-popup" id="comment-popup">
```

CLOSE BUTTON

```
<i class="fa-solid fa-smars" id="close-comments">/i>
```

MOST IMPORTANT PART

You MUST have this CSS:

```
.comment-popup.active {
  right: 10px;
}
```

because THAT is what makes it slide onto the screen.

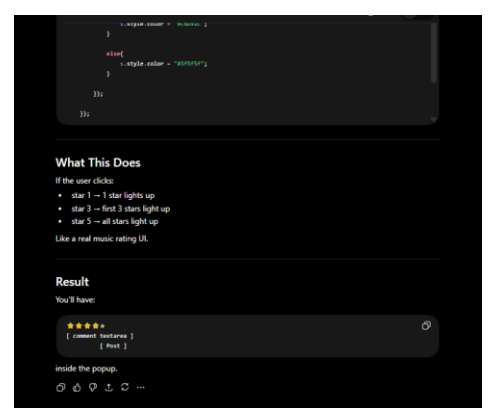

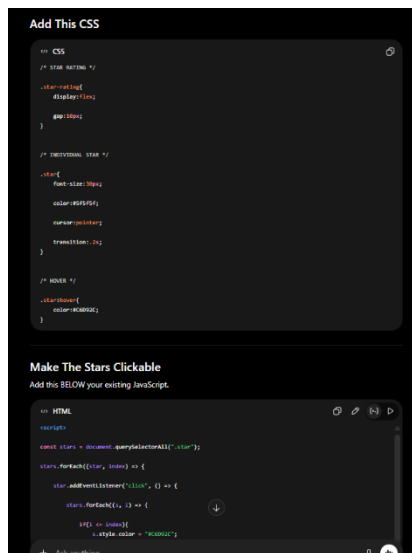

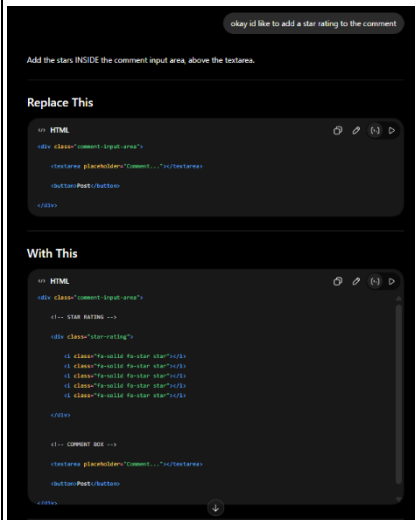

Without it, the popup stays stuck at:

```
.comment-popup {
  right: -70px;
}
```

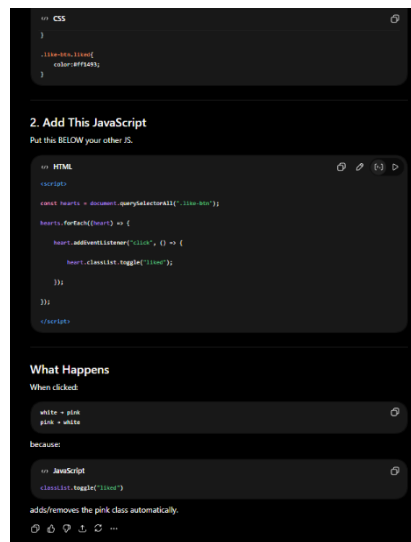

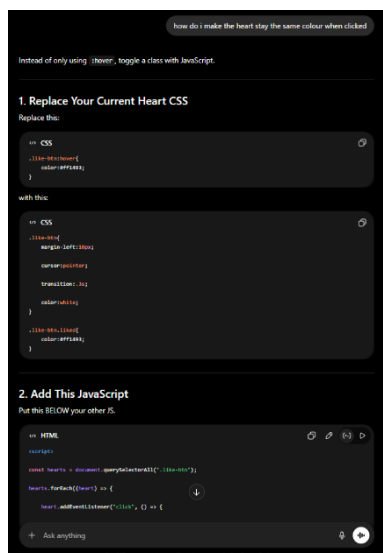

forever.

Help with particular layout and adding countdown timer

when i click on an album, id like the following to happen. this is a design of what i mean

Based on the design in `image_85e9d8.png`, you are looking for a modal-style "Quick View" overlay that triggers when a user clicks on an album cover.

This specific UI pattern provides a focused, high-contrast preview without navigating the user away from the main discovery page.

UI Analysis of the Overlay

According to image_85e9d8.png, the overlay should include these specific elements:

- **Darkened Background:** The main interface behind the modal is dimmed and blurred to keep the focus on the selected content.
- **Rounded Capsule Container:** A vertically oriented, rounded rectangular container with a subtle blue-to-grey gradient background.
- **Album Art Display:** The album cover is centered in the upper half of the modal with significant padding.
- **Text Hierarchy:**
 - **Title:** Bold, uppercase "PUREFLOW, pt.1".
 - **Artist:** "LE SSERAFIM" in a slightly smaller, secondary font.
 - **Release Info:** "Expected May 22, 2026" listed clearly at the bottom of the text block.
- **Navigation:** A "Back" arrow icon in the top-left corner of the modal to allow the user to

okay so when i click on the albums the desired albums are not appearing link they are supposed to <!DOCTYPE html>

```
<html lang="en">
  <head>...
```

The reason it isn't working is that your HTML currently has the **logic** (the script) and the **triggers** (the `onclick`), but it's missing the actual **structure** (the `<dialog>` element itself) in the code you just shared.

Think of it like this: your script is trying to fill a bucket with water, but the bucket doesn't exist on the page yet!

Here is the fixed, full code. I have added the `<dialog>` block right before the `</body>` tag and cleaned up some extra `<main>` tags that were overlapping.

The Complete Fixed HTML

```

<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="UTF-8" />
  <meta name="viewport" content="width=device-width, initial-scale=1" />
  <title>Homepage</title>
  <link rel="stylesheet" href="style.css" />
  <link rel="stylesheet" href="https://cdn.jsdelivr.net/npm/flatpickr/dist/flatpickr.min.css" />
</head>

<body>
  <div id="logo-container"></div>
</div>

<div class="sidebar-container">
  <div class="friends">
    <div href="#friends.html">
      
    </div>
    <div href="#friends.html">
      
    </div>
  </div>
</div>

```

```
CSS

.album-info h2 {
  font-size: 1.1rem;
  font-weight: 400;
  margin: 5px 0;
  opacity: 0.9;
}

.album-info p {
  font-size: 1rem;
  margin-top: 10px;
  font-weight: 300;
}
```

Key Implementation Details

- **The Gradient:** I used a linear gradient from a slate blue to a light grey to mimic the lighting in `image_85e9d8.png`.
- **The Shape:** To get that specific "tall pill" look, the `border-radius` needs to be very high (around `80px` or more).
- **Backdrop Filter:** The `backdrop-filter: blur(5px)` is what gives the background that modern, frosted-glass look while keeping the album card sharp.

Would you like the JavaScript snippet to make this appear and disappear when you click the albums?

```
HTML A
<!-- CATEGORY BUTTONS -->
<div class="categories">
    <a href="#new.html" class="link">New</a></button>
    <button><a href="#pop.html" class="link">Pop</a></button>
    <button><a href="#rock.html" class="link">Rock</a></button>
</div>

<!-- UPCOMING ALBUMS -->
<section>
    <div class="section-title">
        <h2>Upcoming Albums
        </h2>
    </div>
    <div class="album">
```

```

HTML      <div>
            <!-- New! Opening... -->
        /></div>
</div>

```

```

HTML
<div class="album-card" onclick="openAlbum('assets/bully.png', 'Bully')

</div>

<div class="album-card" onclick="openAlbum('assets/thefalloff.png', '

</div>

<div class="album-card" onclick="openAlbum('assets/theromantic.png', '

<div class="album-card" onclick="openAlbum('assets/octane.png', 'Octa

</div>
</div>
</section>
</main>
</div>

<!-- !!! THIS IS THE MISSING PART: THE DEADLOO MODAL !!! -->
<dialog id="albumModal" class="album-capsule">
  <button class="back-btn" onclick="document.getElementById('albumModal').close
  <i class="fa-solid fa-arrow-left"></i>
</button>

  <div class="modal-art">
    <img id="modalimg" src="" alt="Album Cover">
  </div>

  <div class="modal-info">
    <h1 id="modalTitle"></h1>
    <h2 id="modalArtist"></h2>
    <p id="modalDate"></p>
  </div>
</dialog>

<!-- JAVASCRIPT TO HANDLE CLICKS -->
<script>
const modal = document.getElementById("albumModal");

function openAlbum(image, title, artist, date) {
  // 1. Fill the "bucket" (the dialog) with info.
  document.getElementById("modalimg").src = image;
  document.getElementById("modalTitle").innerText = title;
  document.getElementById("modalArtist").innerText = artist;
  document.getElementById("modalDate").innerText = date;

  // 2. Show the "bucket"
  modal.showModal();
}

```

```

HTML
// 2. Show the "bucket"
modal.showModal();
}

// Close when clicking outside the pill
modal.addEventListener("click", e => {
  const dialogDimensions = modal.getBoundingClientRect();
  if (
    e.clientX < dialogDimensions.left ||
    e.clientX > dialogDimensions.right ||
    e.clientY < dialogDimensions.top ||
    e.clientY > dialogDimensions.bottom
  ) {
    modal.close();
  }
});
</script>
</body>
</html>

Important Steps:

1. CSS: Make sure the CSS I provided in the previous message (for .album-capsule,
::backdrop, etc.) is in your style.css file.

2. Extra Tags: I removed the triple <main> and </div> tags that were floating at the
bottom of your code to ensure the layout doesn't break.

3. Paths: Ensure your image paths (like assets/pureflowpt1.png) are correct relative to
where your HTML file is saved.

Give this a save and a refresh--your albums should now pop up in that beautiful pill shape from
image_85e9d8.png!

```

and finally id like the timer to be aligned to the centre, and bigger

To finish the look, we need to make the countdown timer stand out by making it larger and forcing it to the center of its container.

Since your .modal-info is currently set to align-items: flex-start (to keep the text on the left), we will use align-self: center and text-align: center on the timer itself to override that and move it to the middle.

The Updated CSS

Add or update these rules in your style.css:

```

CSS
/* Update the Countdown Timer */
.countdown-timer {
  /* 1. Alignment */
  align-self: center; /* Centering it relative to the left-aligned text */
  text-align: center;
  margin: 30px auto 0 auto; /* Added more top margin for breathing room */

  /* 2. Size and Font */
  font-size: 1.8rem; /* Significantly bigger */
  font-weight: 800; /* Extra bold */
  letter-spacing: 2px;

  /* 3. The Pill Design (Matches image_84e980.png) */
  background: rgba(255, 255, 255, 0.2);
  padding: 15px 40px; /* More padding to make the pill look substantial */
  border-radius: 50px;
  display: inline-block;

  /* 4. Extra Polish */
  color: #ffffff;
  box-shadow: 0 4px 15px rgba(0, 0, 0, 0.2);
  min-width: 300px; /* Prevents the pill from jumping when numbers change */
}

/* Ensure modal info fills the width so centering works */
.modal-info {
  width: 400px; /* Matches the album art width */
  margin-top: 30px;
  display: flex;
  flex-direction: column;
  align-items: flex-start; /* Keeps Title and Artist on the left */
}

```

```

CSS
/* 1. Alignment */
align-self: center; /* Centering it relative to the left-aligned text */
text-align: center;
margin: 30px auto 0 auto; /* Added more top margin for breathing room */

/* 2. Size and Font */
font-size: 1.8rem; /* Significantly bigger */
font-weight: 800; /* Extra bold */
letter-spacing: 2px;

/* 3. The Pill Design (Matches image_84e980.png) */
background: rgba(255, 255, 255, 0.2);
padding: 15px 40px; /* More padding to make the pill look substantial */
border-radius: 50px;
display: inline-block;

/* 4. Extra Polish */
color: #ffffff;
box-shadow: 0 4px 15px rgba(0, 0, 0, 0.2);
min-width: 300px; /* Prevents the pill from jumping when numbers change */
}

/* Ensure modal info fills the width so centering works */
.modal-info {
  width: 400px; /* Matches the album art width */
  margin-top: 30px;
  display: flex;
  flex-direction: column;
  align-items: flex-start; /* Keeps Title and Artist on the left */
}

What this does:

• align-self: center: This is the magic line. It tells the browser: "Even though all other text in this box is on the left, I want this specific timer pill to be in the center."

• font-size: 1.8rem: This makes the countdown the most readable part of the information section.

• min-width: 300px: Because countdown numbers change every second, the width of the text can fluctuate. Setting a minimum width stops the "shaking" effect of the pill resizing constantly.

Your layout should now perfectly match the goal: A big back button on the top-left, a centered album cover, left-aligned artist info, and a large, centered countdown at the bottom!

```
