

1) IPO Chart

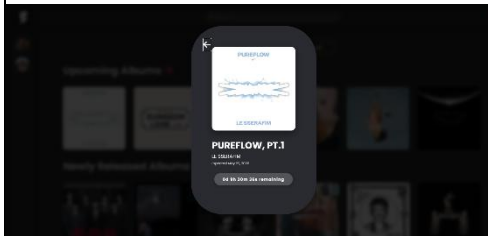

Pages	Input	Process	Output
About.html	User clicks on a section linked to another page (Home/ Services/ About Us/ Contact Us) (Top Navigation Bar)	1. The website identifies which link was clicked 2. The system loads the new page layout	*Expected page is displayed
	User clicks on the image.	System processes the clicked content	The image should be on display on a larger scale
	User clicks on a section linked to another page (Home/ Services/ About Us/ Contact Us) (Bottom Navigation Bar)	1. The website identifies which link was clicked 2. The system loads the new page layout	*Expected page is displayed
Constructions.html	User clicks on a section linked to another page (Home/ Services/ About Us/ Contact Us) (Top Navigation Bar)	1. The website identifies which link was clicked 2. The system loads the new page layout	*Expected page is displayed
	*User hovers the mouse over a card *User clicks on a specific card	1. The system processes the hovered mouse 2. The system processes the input click	*Hover effect is displayed on the screen *The browser opens the respective page linked to a particular card
	User clicks on a section linked to another page (Home/ Services/ About Us/ Contact Us) (Bottom Navigation Bar)	1. The website identifies which link was clicked 2. The system loads the new page layout	*Expected page is displayed
Contact.html	User clicks on a section linked to another page (Home/ Services/ About Us/ Contact Us) (Top Navigation Bar)	1. The website identifies which link was clicked 2. The system loads the new page layout	*Expected page is displayed
	* User Fills in Contact Form	*The system checks if the fields are empty	*Mailing system loads

	*User clicks “Send”	*The system sends a message	
	User clicks on a section linked to another page (Home/ Services/ About Us/ Contact Us) (Bottom Navigation Bar)	1. The website identifies which link was clicked 2. The system loads the new page layout	*Expected page is displayed
Details.html	User clicks on a section linked to another page (Home/ Services/ About Us/ Contact Us) (Top Navigation Bar)	1. The website identifies which link was clicked 2. The system loads the new page layout	*Expected page is displayed
	*User clicks on the “Contact Us” button inside the CTA card	1. The system detects the click interaction on the button 2. The system processes to which the link will direct	*The contact form should be displayed.
	User clicks on a section linked to another page (Home/ Services/ About Us/ Contact Us) (Bottom Navigation Bar)	1. The website identifies which link was clicked 2. The system loads the new page layout	*Expected page is displayed
Index.html	User clicks on a section linked to another page (Home/ Services/ About Us/ Contact Us) (Top Navigation Bar)	1. The website identifies which link was clicked 2. The system loads the new page layout	*Expected page is displayed
	*User hovers the mouse over a card *User clicks on a specific card	1. The system processes the hovered mouse 2. The system processes the input click	*Hover effect is displayed on the screen *The browser opens the respective page linked to a particular card
	*User clicks on the “Contact Us” button inside the CTA card	1. The system detects the click interaction on the button	*The contact form should be displayed

		2. The system processes to which the link will direct	
	User clicks on a section linked to another page (Home/ Services/ About Us/ Contact Us) (Bottom Navigation Bar)	1. The website identifies which link was clicked 2. The system loads the new page layout	*Expected page is displayed
Properties.html	User clicks on a section linked to another page (Home/ Services/ About Us/ Contact Us) (Top Navigation Bar)	1. The website identifies which link was clicked 2. The system loads the new page layout	*Expected page is displayed
	*User hovers the mouse over a card *User clicks on a specific card	1. The system processes the hovered mouse 2. The system processes the input click	*Hover effect is displayed on the screen *The browser opens the respective page linked to a particular card
	User clicks on a section linked to another page (Home/ Services/ About Us/ Contact Us) (Bottom Navigation Bar)	1. The website identifies which link was clicked 2. The system loads the new page layout	*Expected page is displayed
Rentals.html	User clicks on a section linked to another page (Home/ Services/ About Us/ Contact Us) (Top Navigation Bar)	1. The website identifies which link was clicked 2. The system loads the new page layout	*Expected page is displayed
	*User hovers the mouse over a card *User clicks on a specific card	1. The system processes the hovered mouse 2. The system processes the input click	*Hover effect is displayed on the screen *The browser opens the respective page linked to a particular card
	User clicks on a section linked to another page (Home/ Services/ About Us/ Contact Us) (Bottom Navigation Bar)	1. The website identifies which link was clicked 2. The system loads the new page layout	*Expected page is displayed

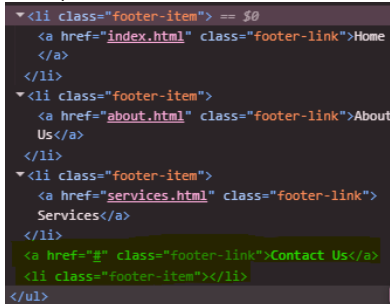

Services.html	User clicks on a section linked to another page (Home/ Services/ About Us/ Contact Us) (Top Navigation Bar)	1. The website identifies which link was clicked 2. The system loads the new page layout	*Expected page is displayed
	*User hovers the mouse over a card *User clicks on a specific card	1. The system processes the hovered mouse 2. The system processes the input click	*Hover effect is displayed on the screen *The browser opens the respective page linked to a particular card
	User clicks on a section linked to another page (Home/ Services/ About Us/ Contact Us) (Bottom Navigation Bar)	1. The website identifies which link was clicked 2. The system loads the new page layout	*Expected page is displayed

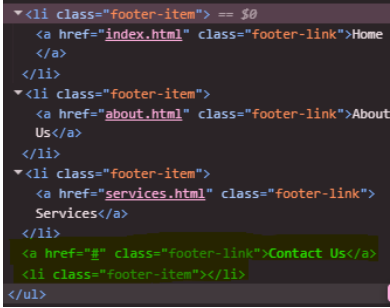

2) Test Case

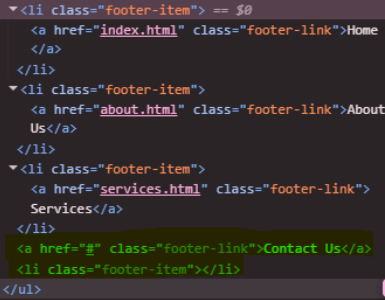

Pages	Action	Input	Output	Result	Comments
About.html	Functional Menu	Clickable Content	Led to the respective pages	Pass	n/a
	Larger Image Preview	Clickable image	Larger image	Pass	Overall good, but I did not notice that I was led to another tab. My suggestion would be to keep the image on the same page, but on click, make the background darker with a slight blur, but still visible enough to show the page. 
	Bottom Navigation bar	Clickable content (text)	Led to respective pages	Fail	All of them were functional except "Contact Me"; this was the following code: (highlighted in green, find the error) <pre> <li class="footer-item"> == \$0 Home <li class="footer-item"> About Us <li class="footer-item"> Services Contact Us <li class="footer-item"> </pre> 1- The first line highlights another page being linked; however, that page is not stated. "contact.html" should have been included instead of '#' 2- The second line indicates a class, but with no content. The first line highlighted in green should have been placed in that class
Constructio ns.html	Functional Menu	Clickable Content	Led to the respective pages	Pass	n/a
	Functional Cards	Clickable content	Led to the	Pass	The clickable cards all have a long animation set on them; a short animation would have been better.

			respective pages		-The hover colour on the words almost blends with the background colour. Maybe the colour of the “Contact Us” button could have worked.
	On click led to the details page	Clickable content	Led to the respective page with the details	Pass	-Unique pages are expected for all the cards pressed -Text on the right side of the image is too small to read. I would make the text bigger and add a scrollbar if there is an overflow.
	Bottom Navigation bar	Clickable content (text)	Led to respective pages	Fail	All of them were functional except “Contact Me”; this was the following code: (highlighted in green, find the error)  1- The first line highlights another page being linked; however, that page is not stated. “contact.html” should have been included instead of ‘#’ 2- The second line indicates a class, but with no content. The first line highlighted in green should have been placed in that class
Contact.html	Functional Menu	Clickable Content	Led to the respective pages	Pass	n/a
	Contact form	Input text	For all information to appear in the email (instead of rewriting)	Pass	-I would centre the “Contact Us” title and make it bigger + the information below the form for better alignment -Footer should remain at the bottom, scroll should end with the bottom navigation at the bottom, not
	Contact form	Input text (less than the expected amount)	Warning pop-up	Pass	n/a

	Bottom Navigation bar	Clickable content (text)	Led to respective pages	Fail	All of them were functional except “Contact Me”; this was the following code: (highlighted in green, find the error)  1- The first line highlights another page being linked; however, that page is not stated. “contact.html” should have been included instead of ‘#’ 2- The second line indicates a class, but with no content. The first line highlighted in green should have been placed in that class
Details.html	Functional Menu	Clickable Content	Led to the respective pages	Pass	n/a
	Contact Us Button	Clickable button	Led to the contact page	Fail	1- Hover effect works; however, the words do not change colour as stated. 2- When the button is pressed away from the words “Contact Us”, it does not work. However, when clicked on the words, it does lead me to the contact page.
	Bottom Navigation bar	Clickable content (text)	Led to respective pages	Fail	All of them were functional except “Contact Me”; this was the following code: (highlighted in green, find the error)  1-The first line highlights another page being linked; however, that page is not stated. “contact.html” should have been included instead of ‘#’ 2-The second line indicates a class, but with no content. The first line highlighted in green should have been placed in that class.

Index.html	Functional Menu	Clickable Content	Led to the respective pages	Pass	n/a
	Functional Cards + Words	Clickable content	Led to the respective pages	Pass	-The clickable cards all have a long animation set on them; a short animation would have been better. -The hover colour on the words almost blends with the background colour. Maybe the colour of the “Contact Us” button could have worked.
	Contact Us button	Clickable button	Led to the contact page	Fail	1- Hover effect works; however, the words do not change colour as stated. 2- When the button is pressed away from the words “Contact Us”, it does not work. However, when clicked on the words, it does lead me to the contact page.
	Bottom Navigation bar	Clickable content (text)	Led to respective pages	Fail	All of them were functional except “Contact Me”; this was the following code: (highlighted in green, find the error)  <pre> <ul class="footer-item"> == \$0 <li class="footer-item"> Home <li class="footer-item"> About Us <li class="footer-item"> Services <li class="footer-item"> Contact Us </pre> 1-The first line highlights another page being linked; however, that page is not stated. “contact.html” should have been included instead of ‘#’ 2-The second line indicates a class, but with no content. The first line highlighted in green should have been placed in that class.
Properties.html	Functional Menu	Clickable Content	Led to the respective pages	Pass	n/a
	Functional Cards (services individually)	Clickable content	Led to the respective pages	Pass	The clickable cards all have a long animation set on them; a short animation would have been better. -The hover colour on the words almost blends with the background colour. Maybe the colour of the “Contact Us” button could have worked.

	On click led to the details page	Clickable content	Led to the respective page with the details	Pass	-Unique pages are expected for all the cards pressed -Text on the right side of the image is too small to read. I would make the text bigger and add a scrollbar if there is an overflow.
	Bottom Navigation bar	Clickable content (text)	Led to respective pages	Fail	All of them were functional except "Contact Me"; this was the following code: (highlighted in green, find the error)  1-The first line highlights another page being linked; however, that page is not stated. "contact.html" should have been included instead of '#' 2-The second line indicates a class, but with no content. The first line highlighted in green should have been placed in that class.
Rentals.html	Functional Menu	Clickable Content	Led to the respective pages	Pass	n/a
	Functional Cards	Clickable content	Led to the respective pages	Pass	The clickable cards all have a long animation set on them; a short animation would have been better. -The hover colour on the words almost blends with the background colour. Maybe the colour of the "Contact Us" button could have worked.
	On click led to the details page	Clickable content	Led to the respective page with the details	Pass	-Unique pages are expected for all the cards pressed -Text on the right side of the image is too small to read. I would make the text bigger and add a scrollbar if there is an overflow.
	Bottom Navigation bar	Clickable content (text)	Led to respective pages	Fail	All of them were functional except "Contact Me"; this was the following code: (highlighted in green, find the error)

					 1-The first line highlights another page being linked; however, that page is not stated. "contact.html" should have been included instead of '#' 2-The second line indicates a class, but with no content. The first line highlighted in green should have been placed in that class.
Services.html	Functional Menu	Clickable Content	Led to the respective pages	Pass	n/a
	Functional Cards	Clickable content	Led to the respective pages with the information required	Fail	-I expected to be led to the details page since I clicked on an image -My suggestion would be to keep the layout how it is, but insert a clickable arrow next to the type of service being offered (ex. Properties ->) that leads to the rest of the information about the service.
	Bottom Navigation bar	Clickable content (text)	Led to respective pages	Fail	All of them were functional except "Contact Me"; this was the following code: (highlighted in green, find the error)  1-The first line highlights another page being linked; however, that page is not stated. "contact.html" should have been included instead of '#' 2-The second line indicates a class, but with no content. The first line highlighted in green should have been placed in that class.

3) Validating

about.html: Not Valid

- Warning** Consider using the `h1` element as a top-level heading only — or else use the `headingoffset` attribute (otherwise, all `h1` elements are treated as top-level headings by many screen readers and other tools).
From line 56, column 17 to line 56, column 40
`<h1 class="about-title">What I`
- Warning** Article lacks heading. Consider using `h2`–`h6` elements to add identifying headings to all articles.
From line 52, column 9 to line 52, column 31
`<article class="story">`
- Error** Stray end tag `div`.
From line 101, column 13 to line 101, column 18
`</div>`

construction.html: Not Valid

- Error** The `main` element must not appear as a descendant of the `section` element.
From line 81, column 1 to line 81, column 27
`</div><main class="main-content">`
- Error** The `main` element must not appear as a descendant of the `main` element.

308 .navbar Same color for [background-color] and [border-color]

Comments:

- 1) Replace the # placeholder in the footer's "Contact Us" link with the correct HTML path, contact.html.
- 2) Ensure each page has one unique `<h1>` element.
- 3) Remove nested main elements and ensure main is not placed inside section elements.
- 4) Properly close all tags (div, section, main, header, footer), so as not to get errors such as "unclosed element" and "stray end tag" errors.
- 5) Never have illegal spaces in the name of an image; rename "construction (1).jpg" to, for example, "construction_1.jpg".
- 6) Check Style.css for unclosed brackets or comments that might be breaking your styles.
- 7) Include `<h2>` or `<h3>` elements within all `<section>` and `<article>` tags.
- 8) Use `display: block` and `padding` on buttons so the entire area is clickable, not just the text.

4) Overall comments + Suggestions:

Overall, the website is good! Simple yet easy to understand, and importantly, user-friendly. Additionally, it is functional and easy to navigate. However, it does lack design-wise. The visual appeal is too simple because every page is almost identical. I would suggest keeping the simplistic look, but add an element that at least differentiates from other pages so that the user does not get confused in the long run. Functionality-wise, I would suggest making the entire call-to-action/contact us button functional, not just the text, and making sure that the animation duration is shorter so that the user can see the larger scale photo much quicker.

Furthermore, I ran these tests and used validators to find hidden coding mistakes and make sure the website actually works. Doing this is important because it ensures the site doesn't break on different browsers and gives the user a good experience while browsing through the website. There were issues, and I gave my comments on the previous page.

Therefore, with the suggestions I have given, the website can have a long-lasting impact due to its functionality and visual appearance, which will keep users engaged and browsing more throughout the website.
